

CENTRAL BOARD OF SECONDARY EDUCATION — PRACTICE EXAMINATION**CLASS IX • SOCIAL SCIENCE (SUBJECT CODE: 087) • ACADEMIC SESSION 2026-27****SET F — RAPID FIRE SPEED TEST (30 MINS)****CHAPTER 02: SHAPING OF THE EARTH'S SURFACE**

TIME ALLOWED: 30 MINUTES

MAXIMUM MARKS: 25 MARKS

SERIES: CBS-IX-SST-SET-F-02

Student's Name: _____

Roll No.: _____

Class & Section: Class IX - _____

Date of Exam: _____

Invigilator's Sign: _____

General Instructions (SET F - Rapid Fire Speed Test):

1. The question paper comprises **25 Rapid Fire Multiple Choice Questions** of **1 mark each**.
2. Designed for **Rapid Recall & High-Speed Accuracy**: Recommended target time is **30 Minutes**.
3. All questions are compulsory. There is no negative marking.
4. Darken the corresponding bubble on the **OMR Sheet** completely using a blue/black ballpoint pen.

⚡ SPEED CHALLENGE INSTRUCTIONS: Answer promptly without looking at notes. Test your instant recall of historical milestones, geographic terms, constitutional provisions, and core economic laws!

Q.1 Geomorphic forces originating deep within the interior of the Earth are classified as:

- | | |
|---------------------|----------------------|
| (A) Exogenic forces | (B) Endogenic forces |
| (C) Aeolian forces | (D) Fluvial forces |

Q.2 The point on the Earth's surface directly vertically above the subterranean earthquake focus is the:

- | | |
|-----------------|---------------|
| (A) Hypocentre | (B) Epicentre |
| (C) Fault plane | (D) Crater |

Q.3 Which seismic waves are the fastest and travel through both solids and liquids?

- | | |
|-------------------------|-----------------------|
| (A) Secondary (S) waves | (B) Primary (P) waves |
| (C) Love waves | (D) Rayleigh waves |

Q.4 Which seismic waves cannot propagate through liquids and are blocked by the Earth's liquid outer core?

- | | |
|-----------------|---------------------------|
| (A) P-waves | (B) S-waves (Shear waves) |
| (C) Sound waves | (D) Electromagnetic waves |

Q.5 The Himalayas are classified as what type of mountain range?

- | | |
|---------------------------|---------------------------|
| (A) Volcanic mountains | (B) Young fold mountains |
| (C) Block fault mountains | (D) Residual relict hills |

Q.6 What type of plate boundary is formed where two tectonic plates pull apart from each other?

- | | |
|-------------------------|------------------------|
| (A) Convergent boundary | (B) Divergent boundary |
| (C) Transform boundary | (D) Subduction trench |

Q.7 The San Andreas Fault in California is a classic global example of a:

- | | |
|-----------------------|------------------------------------|
| (A) Subduction zone | (B) Transform fault plate boundary |
| (C) Mid-oceanic ridge | (D) Volcanic island arc |

Q.8 The in-situ mechanical disintegration and chemical decomposition of rocks without transportation is termed:

- | | |
|------------------|----------------|
| (A) Erosion | (B) Weathering |
| (C) Mass wasting | (D) Deposition |

Q.9 What landform is carved by a river during its youthful stage in high mountain terrain?

- | | |
|---------------------|-------------------------------------|
| (A) U-shaped valley | (B) Deep V-shaped valley and gorges |
| (C) Oxbow lake | (D) Delta |

Q.10 An abandoned crescent-shaped lake formed on a mature river floodplain when a meander neck is cut off is an:

- | | |
|----------------|--------------|
| (A) Oxbow lake | (B) Cirque |
| (C) Lagoon | (D) Sinkhole |

Q.11 Glaciers transform pre-existing river valleys into broad troughs with which cross-sectional profile?

- | | |
|---------------------|-----------------------|
| (A) V-shaped valley | (B) U-shaped valley |
| (C) Box canyon | (D) Circular sinkhole |

Q.12 An amphitheatre-like, hollow rock basin carved high on mountain slopes by glacial nivation is a:

- | | |
|-------------|---------------------|
| (A) Yardang | (B) Cirque (Corrie) |
| (C) Barchan | (D) Delta |

Q.13 Unsorted glacial debris and till deposited in ridges along the terminus and margins of a glacier are called:

- | | |
|-------------------|--------------|
| (A) Sand dunes | (B) Moraines |
| (C) Alluvial fans | (D) Loess |

Q.14 Crescent-shaped sand dunes in desert environments whose horns point in the direction of the wind are called:

- | | |
|--------------------|--------------|
| (A) Seifs | (B) Barchans |
| (C) Mushroom rocks | (D) Yardangs |

Q.15 Pedestal rocks in arid deserts characterized by a narrow stalk and broad top are commonly termed:

- | | |
|--------------------|--------------|
| (A) Mushroom rocks | (B) Barchans |
| (C) Gorges | (D) Spits |

Q.16 Extensive, unstratified, wind-blown deposits of fine fertile dust in northern China are known as:

- | | |
|--------------|-------------|
| (A) Loess | (B) Moraine |
| (C) Alluvium | (D) Scree |

Q.17 What coastal landform is left as an isolated vertical rock pillar when the roof of a sea arch collapses?

- | | |
|--------------|-----------------------|
| (A) Sea cave | (B) Sea stack |
| (C) Spit | (D) Wave-cut platform |

Q.18 Funnel-shaped surface collapse hollows characteristic of limestone karst regions are termed:

- (A) Sinkholes (dolines) (B) Oxbow lakes
(C) Cirques (D) Hanging valleys

Q.19 Mineral deposits growing upward from the floor of a limestone cave from dripping water are called:

- (A) Stalactites (B) Stalagmites
(C) Cave pillars (D) Moraines

Q.20 What fan-shaped depositional feature develops where a mountain stream abruptly enters a flat plain?

- (A) Alluvial fan (B) Delta
(C) Oxbow lake (D) Cirque

Q.21 What triangular depositional landform develops at a river's mouth where it enters a standing body of ocean water?

- (A) Gorge (B) Delta
(C) Yardang (D) Moraine

Q.22 The physical weathering process where water freezes inside rock joints and expands by ~9% in volume is:

- (A) Thermal exfoliation (B) Frost wedging (frost shattering)
(C) Oxidation (D) Carbonation

Q.23 The Mariana Trench, the deepest oceanic trench on Earth, was formed along which type of plate boundary?

- (A) Divergent rift zone (B) Convergent oceanic-oceanic subduction boundary
(C) Transform strike-slip fault (D) Mid-oceanic ridge

Q.24 What zone circling the Pacific Ocean accounts for the vast majority of global volcanic eruptions and earthquakes?

- (A) Mid-Atlantic Ridge (B) Pacific Ring of Fire
(C) Great Rift Valley (D) Himalayan Arc

Q.25 Catastrophic loss of shear strength in water-saturated sandy soils during earthquake shaking is called:

- (A) Carbonation (B) Soil liquefaction
(C) Frost plucking (D) Hydration

CBSE CANDIDATE OMR ANSWER RESPONSE GRID (SET F)

01	(A) (B) (C) (D)	02	(A) (B) (C) (D)	03	(A) (B) (C) (D)	04	(A) (B) (C) (D)	05	(A) (B) (C) (D)
06	(A) (B) (C) (D)	07	(A) (B) (C) (D)	08	(A) (B) (C) (D)	09	(A) (B) (C) (D)	10	(A) (B) (C) (D)

OFFICIAL ANSWER KEY & RAPID RECALL EXPLANATIONS (SET F)

Q. No.	Correct	Curricular Concept & Rapid Recall Analysis
Q.1	(B)	Endogenic forces originate from thermal and radioactive energy within the Earth, driving diastrophism and volcanism.
Q.2	(B)	The epicentre is the surface point situated directly perpendicular to the underground focus.
Q.3	(B)	P-waves are longitudinal compressional body waves that travel fastest and penetrate all phases of matter.
Q.4	(B)	S-waves require shear rigidity and cannot propagate through liquid media, creating a broad shadow zone beyond 105°.
Q.5	(B)	The Himalayas are young fold mountains formed by the ongoing collision between the Indian and Eurasian tectonic plates.
Q.6	(B)	Divergent boundaries occur where plates move apart, creating mid-ocean ridges and continental rift valleys.
Q.7	(B)	The San Andreas Fault is a transform plate boundary where the Pacific and North American plates slide horizontally.
Q.8	(B)	Weathering is static breakdown in situ; erosion involves detachment and active transport by moving agents.
Q.9	(B)	Vertical hydraulic erosion dominates the youthful course of a mountain river, carving narrow, steep V-shaped valleys.
Q.10	(A)	Oxbow lakes are cutoff meander loops stranded on mature floodplains during high-discharge flood breaches.
Q.11	(B)	Simultaneous basal abrasion and lateral plucking by moving glacial ice carves broad U-shaped troughs.
Q.12	(B)	Cirques are steep-walled, bowl-shaped hollows excavated near mountain summits by freeze-thaw and glacial plucking.
Q.13	(B)	Moraines are linear ridges of unsorted boulders, gravel, and clay deposited by advancing or melting glaciers.
Q.14	(B)	Barchans are crescentic sand dunes whose curved horns extend downwind in regions with unidirectional wind.
Q.15	(A)	Wind sand abrasion concentrates within the bottom 1-2 meters above ground, undercutting rocks into mushroom shapes.
Q.16	(A)	Loess consists of wind-blown, yellowish silt-sized dust deposited over vast areas downwind of arid deserts.
Q.17	(B)	Sea stacks are isolated rocky columns left standing in the ocean after wave collapse of coastal sea arches.
Q.18	(A)	Sinkholes are dissolution depressions formed when groundwater dissolves subterranean limestone roofs.
Q.19	(B)	Stalagmites grow upward from the cave floor; stalactites hang downward from the cave ceiling.
Q.20	(A)	Alluvial fans form when sudden slope deceleration forces mountain streams to dump coarse bedload at plain junctions.
Q.21	(B)	Deltas are wetland depositional landforms built by sediment discharge at river mouths.
Q.22	(B)	Volumetric ice expansion exerts immense tensile stress within fractures, shattering jointed rock faces.
Q.23	(B)	Oceanic trenches are created where a dense oceanic lithospheric slab subducts beneath another plate.
Q.24	(B)	The 'Ring of Fire' is a horseshoe-shaped belt of subduction zones circling the Pacific basin.
Q.25	(B)	Liquefaction transforms solid saturated sandy sediments into liquid slurry during cyclic seismic shaking.
